

AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph beginning on line 3 of page 10 with the following rewritten paragraph:

As indicated in FIGURE 2 [[1]], receiver 21 delivers HTML and XML commands to microprocessor 22 [[21]]. It also transmits any files associated with the HTML content to memory 23. Memory 23 may be any type of memory, but is typically a plug-in type memory such as flash or smart memory.

Please replace the paragraph beginning on line 15 of page 11 with the following rewritten paragraph:

Microprocessor 22 is further programmed with drivers that translate operating system commands into hardware specific commands. The data passed from microprocessor 22 to frame buffer 25 [[24]] is in the form of pixel data suitable for display rendering. Any specialized formatting, such as the "bit plane" formatting used by DMD-type display engines may be performed by processor 22, by the manner of reading into or writing from frame buffer 25 [[24]], or by additional software or hardware.
